Also claimed is a population of oligonucleotide probes (I) specific for measuring the expression levels of members of a classifier population of genes or a toxicity-related population of genes. (I) are useful for identifying agonists or partial agonists of Peroxisome Proliferator-Activated Receptor (PPAR) gamma. ADZ62007-ADZ62272 are oligonucleotide probes which are useful in the method of the invention to measure the expression pattern of the classifier-related population of mouse genes ADZ61704-ADZ62006. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20050084872.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a methods for screening biologically active agents, such as candidate drugs, to determine whether the agent possesses a defined biological activity. The methods involve making one or more comparisons chosen from comparing efficacy value of agent to reference efficacy value, comparing a toxicity value of the agent to reference toxicity value, comparing a classifier value of the agent to
                                                                                                                                                                                                                                                                         Human PG-3 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ADD69391 standard; DNA; 240823 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Determining whether agent has defined biological activity, by making comparison e.g. comparing efficacy value, toxicity value and classifier value of agent to reference values, and using results to determine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2475 BP; 724 A; 589 C; 642 G; 520 T; 0 U; 0 Other;

The molecules of the invention demonstrate vulnerary, antiinflammatory and vasotropic activities whilst the fusion protein may be useful for preparing a composition for treating necrosis, ischaemia or inflammation, as well as for promoting wound healing. The current sequence is that of the human PG-3 DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New fusion protein comprising a fibrinogen-like or coiled-like domain, useful for preparing a composition for treating necrosis, ischemia or inflammation, or for promoting wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 240823 BP; 66383 A; 50394 C; 51548 G; 72418 T; 0 U;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel fusion protein comprising a fib-
like domain (FLD) or coiled-coil domain (CCD). The domain may be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a compound targeted to a nucleic acid molecule encoding the human Angiopoietin-2 polypeptide. The compound is an acid and inhibits expression of the polypeptide. The antisense cligonucleotide that specifically hybridises with the nucleic oligonucleotide expression of the polypeptide. The antisense i.e. a phosphorothicate linkage, at least one modified sugar moiety, preferably a 2.0-methoxyethyl sugar moiety, or at least one modified nucleobase comprising a 5-methyloytosine. The antisense compounds are useful for modulating the expression of the human Angiopoietin-2 polypeptide and in preparation of a composition for treating hyperproliferative disorders, e.g. cancer. This sequence represents DNA encoding the murine Angiopoietin-2 polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a pharmaceutical composition comprising a CC pharmaceutical carrier and an amount of an extracellular matrix (ECM). CC binding fragment of angiopoletin (Ang)-1 protein or a mutant Ang-1. Also CC provided are methods of treating an individual suspected of having CC coronary artery disease, vascular disease or a condition involving CC ischaemia; of promoting angiogenesis, endothelial survival and CC individual suspected of having a disease related to lack of blood vessels condition involving CC individual suspected of having a disease related to lack of blood vessels such as ischaemia in hearts and limbs; CC related to lack of blood vessels such as ischaemia in hearts and limbs; CC artherosclerosis risk by maintaining the patients who had stroke and the CC angioplasty procedure by promoting the patients who had stroke and the CC angioplasty procedure by promoting the growth/survival of endothelial ccells and establish endothelial monolayer and inhibit excessive to treat patients with restenosis by inhibiting re-closure of blood cessel after inserting stents into blood vessels; to make stable and CC vessel after inserting stents into blood vessels; to make stable and converse of identifying compounds that modulates binding of Ang-1 to ECM; of treating an individual suspected of having cancer; of preventing conformation is convergences; vascular diseases and disorders, e.g. cancer, coronary artery canced disease, vascular diseases, ischaemia, restenosis, diabetes, stroke, artery canced in the mouse and convergences in t

and an antisense RNA strand, useful for treating angiogenic diabetic retinopathy or age-related macular degeneration. New isolated small interfering RNA (siRNA) comprising a sense RNA strand and an antisense RNA strand, useful for treating angiogenic disease, e.g e.g.

Claim 2; SEQ ID NO 5; 182pp; English

CC comprises a nucleotide sequence substantially identical to a target CC sequence of 19-25 contiguous nucleotides in human Angl. Ang2 or Tie2 mRNA, or an alternative splice form, mutant or cognate. The invention CC further comprises: a recombinant plasmid comprising nucleic acid sequences for expressing an siRNA comprising a sense RNA strand and an CC antisense RNA strand; a recombinant viral vector comprising nucleic acid sequences for expressing an siRNA comprising a sense RNA strand and an CC antisense RNA strand; a pharmaceutical composition comprising siRNA, the plasmid, or the viral vector and a pharmaceutical carrier; a method of inhibiting expression of human Ang1, Ang2 or Tie2 mRNA, or an alternative splice form, mutant, or cognate; a method of inhibiting angiogenesis in a subject; a method of treating an angiogenic disease in a subject; and a method of treating an angiogenic form type I diabetes in a cc subject. The siRNA oligos have the following activities: antiangiogenic, cytostatic, antidiabetic, ophthalmological, nephrotropic. The subject; and an angiogenesis in a subject. The angiogenesis is pathogenic angiogenesis in a subject. The angiogenesis is pathogenic or non-pathogenic. The non-pathogenic angiogenesis or cholesterol production. The non-pathogenic angiogenesis comprises a tumour associated with a cancer selected from breast cancer, lung cancer, head cancer, pastnormal cancer, colon cancer, concerdad cand neck cancer, neuroblastoma, osteosarcoma, ovarian cancer, pancreatic concerned cancer, prostate cancer, gastrointestinal cancer, glioma, liver cancer, comprises endication arising of from type I diabetes in a cubicar conservation. Treating composition cancer arising concernation. Treating concernation cancer arising concernation. Treating concernation cancer arising concernation cancer arising concernation. Treating concernation cancer aris comprises a sense RNA strand and an antisense RNA strand. The sense antisense RNA strands form an RNA duplex, where the sense RNA strand comprises a nucleotide sequence substantially identical to a target complications arising from type I diabetes in a subject comprises The invention relates to a novel isolated small interfering RNA (siRNA) and

The invention relates to a compound targeted to a nucleic acid molecule encoding the human Angiopoietin-2 polypeptide. The compound is an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits expression of the polypeptide. The antisense oligonucleotide comprises at least one modified internucleoside linkage

The complications arising from type I diabetes are relected from d retinopathy, diabetic neuropathy, or mac disease. The macrovascular disease is coronary artery disease, cerebrovascular disease, or peripheral vascular disease. This

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   i.e. a phosphorothioate linkage, at least one modified sugar moiety, preferably a 2'.O-methoxyethyl sugar moiety, or at least one modified nucleobase comprising a 5-methyloytosine. The antisense compounds are useful for modulating the expression of the human Angiopoietin.2 polypeptide and in preparation of a composition for treating hyperproliferative disorders, e.g. cancer. This sequence represents DNA encoding a human Angiopoietin-2 polypeptide of the invention.

This invention relates to a combination comprising several cDNAs that are CC discloses a high throughput method for detecting differentially expressed convas in a sample. The cDNAs of the invention may have antiatreriosclerotic; cytostatic; cardiant; hypotensive; antidiabetic; cytostatics and cerebroprotective activities and may be used in a high-cytostatic and cerebroprotective activities and may be used in a high-cytostatic and cerebroprotective activities and may be used in a high-cytostatic and cerebroprotective activities and high-cytostatic and cerebroprotective activities and high-cytostatic and cerebroprotective activities and high-cytostatic and collaborate and collaborate activity a

like domain (FLD) or coiled-coil domain (CCD). The domain may be
identical or homologous to that of an angiopoietin-related factor (ARF),
examples of which include Ang (angiopoietin)-1, Ang-2, Ang-3, Ang-4 and
Ang-2X. The molecules of the invention demonstrate vulnerary,
                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 763
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    angiopoietin-related factor; ARF; angiopoietin; Ang-1; Ang-2; Ang-3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                   diabetic retinopathy, macular degeneration caused by neovascularisation, psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and Crohn's disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                    The invention relates to a nucleic acid (I) comprising a segment of 18 bases of chemically pretreated DNA of angiogenesis-associated genes (II) having sequences (ABQ66971-ABQ67178) or their complements. (I), also related oligomers, are used to evaluate the methylation status and/or single-nucleotide polymorphisms, in angiogenesis-related genes, for diagnosis and treatment of eye diseases, proliferative retinopathy, neovascular glaucoma, solid tumours, inflammation, rheumatoid arthritis, disherin retinomathy magnilar degeneration canada by neovasculariestics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid fragments from chemically treated angiogenesis-
associated genes, useful for determining methylation status, e.g
diagnosis or treatment of cancer.

MI comprises identifying a gene whose expression is significantly altered the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection or in a corresponding incompatible or compatible interaction. (MI) is useful for conferring resistance to resistance or tolerance to a plant pacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2000 BP; 336 A; 265 C;

/site 2: Not I; The library was constructed according
Sonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel.First strand cDNA synthesis was primed with Oligo-dT
grimer containing a Not I site .Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AATAATTACG. This library was created for the University
Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /strain="C57BL/6"

                10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114 |gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                  (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                           /lab host="E. coli strain XL10-Gold, T1-resistant, F-"

/note="Cogan: pancreas; Vector: pSPORT1 (GIBCO); Site_1:

Not I; Site_2: Sal I; The library was prepared by

Catherine S. Lee and has not been published. The pancreas
was obtained from Gerard Gradwohl (PNAS 97 P1607-1611,

2000). The cDNA's were prepared with an oligo containing a

NotI site, and SalI linkers were added to the ends. The
inserts were cut with NotI before being cloned into the
NotI-SalI sites in the vectors. This is one of two
libraries, ngn3 wt and ngn3 -/-. The wt library is in
pSPORTI, T7 promoter is 5'."
